**Department of Computer Science and Engineering
Acropolis Institute of Technology and Research, Indore
July-Dec 2026**

1. Introduction (1 paragraph)

A brief introduction of the project should be given in this section. It should explain what the project is about. Describe the rationale behind the project and the probable problems that will be addressed during the project.

2. Objective (50-100 words)

Write the specific objectives of your project. Explain what goals you want to achieve through it.

3. Scope (100 words)

Define the scope of your project. What are the boundaries and limitations of your project's functionality?

4. Study of Existing System (200 words)

Include comparative case study of at least 5 existing systems with their merits and demerits. This will help in formulation of further objectives that could be addressed within the project.

Study and include at least five existing systems or applications related to your project. For each one, describe it with merits and demerits, and what problems it solves. This will help you decide what your project should focus on.

Existing System/Application 1:

- Problems Addressed (what issues the system tries to solve)
- Advantages (features or benefits)
- Disadvantages (weakness or limitations)
- Gaps Identified (What is missing or could be improved)
- Reference link

5. Project Description (150 words)

Write how your project will work.

Describe the project supported by Flowcharts/ER diagram to explain the flow of the information.

Example:

The project has two modules: a customer side and a restaurant side. Customers can create an account, log in, view the menu, select food items, place orders, and pay online. On the restaurant side, staff can log in, view incoming orders, confirm them, and update their status once completed. The system will maintain a database of customers, menus, and orders. This database will be central to keeping everything updated in real time.

6. Planning of the Project work (200 words)

Explain how you will complete the project step by step. You can also include a timeline or Gantt chart.

Include a Gantt chart for timeline with milestones.

Example:

The project will be completed in 8 weeks:

- **Weeks 1–2:** Requirement gathering and system design.
- **Weeks 3–4:** UI design (login, signup, and menu pages).
- **Weeks 5–6:** Backend development using Node.js and Express.js; database setup in MongoDB.
- **Week 7:** Testing – unit and integration testing.
- **Week 8:** Deployment and documentation.

A Gantt chart will display these tasks and milestones clearly.

7. Features

List the main features and functionalities of the project. What will users be able to do with your project?

Describe the main functions and capabilities of the software. What does it do?

For example, for a project management tool, core features might include task tracking, team collaboration, and project scheduling.

You may include:

1. User interface features
2. Functional features
3. Security features
4. Performance features
5. Reporting and analytics
6. User experience enhancements like notifications

8. System architecture

Provide an overview of the system architecture. How will different components interact with each other? You can provide a high level diagram to understand the system.

9. User Interface (UI)

Describe the user interface design. You can include Form designs, wireframes or mockups if applicable.

10. Technology Stack

List the technologies, programming languages, frameworks, and databases you'll use.

11. Testing Plan

Explain how you'll test the project to ensure its functionality and reliability.

Provide test cases.

12. Expected Outcome (100-150 words)

Briefly illustrate the outcomes of the project along with the benefits to the society.

13. Resources and Limitations (100 words)

The requirement of the resources for designing and developing the project. The resources might be in form of the hardware / software or the data from the industry. Describe the limitations of the project.

14. Conclusion (100-150 words)

The write-up must end up with the concluding remarks-briefly.

15. References

Mention the sources referred for the study and development of the project. References include literature, books, websites, or any other kind of resource directly or indirectly referred for development of project and its report.
