Project Presentation Outline

- ❖ Introduction
- ❖ Problem Statement
- ❖ Survey of Existing Systems
- ❖ Project Objectives
- ❖ Requirement Analysis
- ❖ Solution Proposed
- ❖ Features
- ❖ System architecture
- ❖ User Interface
- ❖ Testing Plan
- ❖ The Outcome Discussion
- ❖ Conclusions

Introduction

- ❖ Introduction about your project title
- ❖ Brief introduction of solution provided
- ❖ The motivation behind undertaking specific problem

The Problem Statement

- ❖ State Specific problem statement for which the solution is being proposed

Survey of Existing Systems

- ❖ Compare at least 5 existing systems/ software relevant to your project along with their characteristics/advantages/disadvantages.
- ❖ The comparison should be such that specific gaps could be identified as to have the final project objectives.

Objectives

- ❖ The specific objectives to be addressed while development work
- ❖ Example:
 - To provide an interface to access the student information.

Requirement Analysis

- ❖ Identify and describe functional and non-functional specifications

Solution Proposed

❖ The method/technique applied for development of project

Features

- ❖ Main features and functionalities of the project. What will users be able to do with your project?
- ❖ Describe the main functions and capabilities of the software. What does it do?
- ❖ For example, for a project management tool, core features might include task tracking, team collaboration, and project scheduling.

System Architecture

- ❖ Provide an overview of the system architecture. How will different components interact with each other? **Provide a high level diagram.**

User Interface

- ❖ Describe the user interface design. You can include wireframes, form designs or mockups if applicable.

Testing Plans

- ❖ Explain how you'll test the project to ensure its functionality and reliability. Include test cases.

The Outcome

❖ Expected outcome of the project development work

Conclusion

❖ Conclude your project idea.
